

SWINE (H1N1) VIRUS

Many people are asking about Swine Flu, and if our products are effective in keeping people from catching it. Swine Flu is a virus whose primary point of entry into the body is through the respiratory system.

There is no one product that protects against the Swine Flu virus. It is unlike MRSA, a bacterial infection that targets the skin.

What is the best technique for washing my hands to avoid getting the flu?

Washing your hands often will help protect you from germs. Wash with soap and water or clean with alcohol-based hand cleaner. CDC recommends that when you wash your hands -- with soap and warm water -- that you wash for 15 to 20 seconds. When soap and water are not available, alcohol-based disposable hand wipes or gel sanitizers may be used. If using gel, rub your hands until the gel is dry. The gel doesn't need water to work; the alcohol in it kills the germs on your hands.

BWB Enterprise offers many products that are effective hand washing products. Our lotion soaps are effective for removing transient organisms from the skin. Our antibacterial hand soaps add an extra level of protection by not only removing the germs but killing them. Our alcohol gels and foams and our quaternary based hand sanitizers are effective at killing many germs. We also offer SaniGuard® Surface Spray, the world's first and only DRY-ON-CONTACT Spray Sanitizer & Deodorizer. SaniGuard sanitizing products are EPA registered, patented, and have been proven to kill 99.99% of Avian Flu and 39 other various germs, bacteria, fungus, and viruses in mere seconds; including: MRSA, Ringworm, HIV, E-Coli, Salmonella, and Herpes. Safe for food contact surfaces (no potable rinse required) and other non-porous surfaces including electronics!

Call BWB at 1-888-593-5900 to find solutions to keep you germ-free and prevent the flu.
